Happy Spring!

We are pleased to notify you that your deck floor is one of 18 budgeted to be replaced this year. The vendor will be starting approx. mid-April weather dependent. We do not know start date, what units they will do first or in what order but when we do, we will let you know.

In order to begin, everything on your deck must be removed prior to the start date as the entire deck floor will be replaced by Trex flooring, which lasts a life-time and beyond. Any additional issues uncovered pertaining to the support beams or siding will also be addressed when they work on your deck.

You may want to read up on Trex material. Because this material is composed of both wood and plastic, what we have found is this flooring is a bit more slippery when wet and definitely gets hotter in the sun. You will never have to treat or coat your deck using Trex.

As we get closer to the start date, we will send you an update/reminder email.

Regards,

Board of Directors
